

Océ Power Logic[®] Controller

TDS Controller Platform

Powerful, fast, and Web enabled

The Océ Power Logic controller™ provides a powerful, fast, web-enabled controller platform across the entire Océ TDS series of printers, scanners and multi-function systems. It gives users unprecedented control over their TDS system.

Key Benefits of Océ Power Logic Controller

- Common functionality across the entire TDS line
- Easy integration into the customers existing network
- Suite of productivity enhancing applications are included

The Océ Power Logic controller provides a powerful, fast, web-enabled controller platform across the entire Océ TDS series of printers, scanners and multi-function systems. It provides common functionality across the Océ TDS range such as concurrency, sets building, and the optional Accounts Logging.

With the uniform power logic applications, a user that has access to more than one type of TDS machine will intuitively be able to print to and manage all Océ TDS systems. Océ Remote Logic™ provides access to the Océ Power Logic applications from workstations on the network.

Standard applications on the Océ Power Logic controller include Océ

Advanced Queue Manager, Océ Settings Editor, and Océ System Control Panel.

Océ Remote Logic

Océ Remote Logic enables users to remotely manage their Océ TDS system from any workstation on the network. Océ Remote Logic supports the Océ System Control Panel, Océ Settings Editor and Océ Advanced Queue Manager.

Océ Advanced Queue Manager

Océ Advanced Queue Manager is part of the Océ Power Logic suite of applications. It is a powerful queue management tool with the ability to reprint copy and print jobs from a history folder, plus an inbox queue to manage print jobs to be printed on demand. It also has the ability to automatically bypass a job that can not be processed correctly.

Océ Settings Editor

Gives the user control over all system defaults and settings.

Océ System Control Panel

Allows the user to see the status of the printer, scanner, and controller.

Optional Features

Océ Scan Logic, Océ's premium scan to file solution consists of Océ Scan Manager and Océ View Station LT. Scanned files can be saved to any destination.

Océ Account Logging provides a record of all copying, scanning and printing activity. It is stored in a text file that is easily imported into most report generating applications.

Océ Print Exec LT Web is a controller based print submission tool that allows users to submit prints to their TDS system using the web browser on their networked workstations.

Adobe™ Postscript3 / PDF allows users to print out Postscript as well as PDF files
